ComfyUI + Runpod

By Jessica Garson Beauchemin

Hi, I’m Jessica Garson Beauchemin 👋

I lead Developer Relations at Runpod

runpod

The AI Developer Cloud

Experiment, train, fine-tune, deploy, scale on one AI system

runpod.io

One of our most widely used templates is the ComfyUI template

It’s been really fun lately to play with ComfyUI, Runpod and MiniMax H3

© 2026 Runpod Inc. All rights reserved. Confidential and proprietary.

We have a blog post on this

From template to cartoon

My coworker took this photo last week

I made this into a video!

ComfyUI

Playful 2D cartoon animation in a bright, hand-drawn animated-series style: bold clean outlines, flat cel-shaded colors, soft simple shading, slightly exaggerated friendly expressions and bouncy motion. The scene is Picture 1 redrawn as a cartoon: a busy tech conference booth with a purple-and-white runpod counter and a backdrop banner, attendees in backpacks and caps chatting with smiling booth staff. Keep the same layout, people, clothing colors, and the runpod branding, but render everything as a cheerful cartoon world. No computer mice or product close-ups; the focus is on the people and the booth.

SHOT 1: The scene opens exactly on image 1, now cartoon-styled; the booth staff gestures enthusiastically while the attendees nod and lean in, small animated sparkles and speech-bubble-like pops of energy around the conversation as the camera slowly pushes in.

SHOT 2: Cut to a medium shot of the booth staff laughing and pointing toward the banner; the attendee in the cap gives a big cartoon thumbs-up, and the runpod logo on the counter gives a gentle glowing bounce.

SHOT 3: Pull back to a wide shot of the whole booth with more cartoon attendees strolling past, everyone animated with lively, springy movement, ending on a cheerful freeze-frame of the runpod booth.

Audio: upbeat, bouncy cartoon background music, light crowd chatter, playful pop and boing sound effects on gestures.

What the template gives you out of the box

Sample image

A transparent RGB gaming mouse, used as the video’s first frame.

Default prompt

A dark product film: black studio, blue and orange neon light, three shots.

Default settings

1:1 square at 0.4 MP, 5 seconds with audio, turbo mode off.

© 2026 Runpod Inc. All rights reserved. Confidential and proprietary.

I changed two things. Everything else stayed default

The photo

Swapped the sample gaming mouse for a photo of our booth.

The prompt

Rewrote the style, subject, shots and audio.

Left as default

Resolution, length, models, seed and turbo setting.

The key lines from my prompt

Style

“Playful 2D cartoon animation in a bright, hand-drawn animated-series style”

Subject

“Keep the same layout, people, clothing colors, and the runpod branding”

Guardrail

“No computer mice or product close-ups”

© 2026 Runpod Inc. All rights reserved. Confidential and proprietary.

Same structure as the template, new story

Template’s shots

Push-in on the mouse, scroll-wheel macro, levitating mouse. Sub-bass and clicks.

My shots

Push-in on the chat, a thumbs-up and logo bounce, a wide freeze-frame. Cartoon music and boings.

What I kept

Three shots and an audio cue, in the same order.

The ComfyUI API runs on Runpod

Terminal

```
$ comfy build init
✓ Scanned this ComfyUI install - custom nodes, models, pinned deps
$ comfy build push --release
```
